

What gets measured, gets managed.

INNOVATIVE SOLUTIONS FOR COST EFFECTIVE
WATER RESOURCES MEASUREMENT, MONITORING & ALERTING

VIGIFLOOD Flood Warning

Flood warning ground stations include river hydrometric stations, precipitation stations and water level change measuring stations.

VIGIFLOOD is a set of telemetry devices that can be installed in these stations. **VIGIFLOOD** is a complete solution includes **VIGIRIVER**, **VIGIRAIN** and **VIGILEVEL**.

VIGIFLOOD is able to measure and record all the parameters required for flood warning and transmit and alert via SMS and GPRS.

Settings of **VIGIFLOOD** set can be done with the help of **VIGISOFT** software through on-site and remote communication ports.

Data sent via **VIGIFLOOD** can be received and managed with the help of a client / server software called **WaterQuery**.

The features of **VIGIFLOOD** are simplicity, low cost, very low energy consumption, simple calibration, resistance to sediment and corrosion, simple installation and anti-vandalism.

For More information, please see VIGILEVEL, VIGIRAIN, VIGIRIVER, VIGISOFT and WaterQuery brochures.
